LETTER OF RECOMMENDATION

To Whom It May Concern,

I am writing this letter in support of Jaenil Parekh, a third-year undergraduate student in the Department of Computer Science and Engineering at the Indian Institute of Technology (IIT) Jodhpur. Jaenil completed an internship within the Advanced Analytics group at Cummins India, from 22 June 2026 to 22 July 2026, under the broader oversight of my team. I am pleased to offer this recommendation based on my observation of his work during this engagement.

Self-Adaptive Governance Framework for Prognostic Models: Jaenil developed a Tabular Q-Learning agent that dynamically optimizes RUL model retraining schedules, significantly reducing operational costs compared to standard baselines. During his internship, Jaenil also addressed performance degradation in prognostic models caused by data drift.

Beyond the technical implementation, Jaenil displayed exceptional professional maturity. He worked with minimal supervision to navigate the difficult trade-offs between prediction accuracy and computational overhead, successfully translating theoretical reinforcement learning concepts into a functional, modular proof-of-concept. His ability to work independently while delivering high-quality, scalable solutions made a significant impact on our team's approach to predictive model governance.

I strongly recommend Jaenil Parekh; the rigor and autonomy he brought to this project are truly impressive for an undergraduate intern, and I am confident he will be a valuable asset in his future pursuits. If you need any further information, please feel free to contact me.

Sincerely,

Nilesh Powar, PhD
Director — Analytics & AI
Cummins India Ltd.
